daVinci Robotic Hysterectomy

Minimally invasive surgical removal of the uterus using advanced robotic technology

WHAT IS A DAVINCI HYSTERECTOMY?

A daVinci hysterectomy is a **minimally invasive surgical procedure** that removes the uterus using a robotic system. Your surgeon controls small, precise robotic instruments through tiny incisions — providing exceptional precision not possible with traditional surgery.

When Is It Recommended?

- Pelvic pain
- Heavy bleeding
- Uterine fibroids
- Endometriosis
- Uterine prolapse
- Uterine cancer

BENEFITS OF THE DAVINCI APPROACH

- **Less blood loss** compared to traditional open surgery
- **Less pain** and reduced need for pain medication after surgery
- **Shorter hospital stay** — most patients go home the same day or next day
- **Faster recovery** — return to normal activities within 2–4 weeks
- **Smaller incisions** — minimal scarring
- **Reduced infection risk** compared to open abdominal surgery

SURGICAL DECISIONS TO DISCUSS

Ovaries

Removing ovaries may be recommended based on your age, medical history, and cancer risk. Removal causes early menopause (hot flashes, vaginal dryness, mood changes).

Fallopian Tubes

Removing tubes (salpingectomy) significantly reduces ovarian cancer risk. Many patients opt for opportunistic tube removal during hysterectomy.

Cervix

Total hysterectomy removes the cervix (eliminates cervical cancer risk; no more Pap smears). Supracervical leaves the cervix intact.

RISKS & RECOVERY

Potential Surgical Risks (rare)

- Bleeding or infection
- Damage to surrounding organs
- Reaction to anesthesia

Recovery Timeline

- Most women resume normal activity in **2–4 weeks**
- Avoid heavy lifting during recovery
- Keep all follow-up appointments

Call Dr. Klein immediately if you develop: Fever, severe pain, heavy bleeding, or shortness of breath after surgery.

We're Here to Guide You Through Every Step

A daVinci hysterectomy is a safe and effective procedure. Dr. Klein will discuss all risks and benefits with you prior to surgery and take every step to minimize complications. Questions? Call us at
